

Miha Friškovec

SENIOR SOFTWARE ENGINEER · FREELANCE AI INTEGRATION ENGINEER

friskovec.miha@gmail.com · github.com/MihaFriskovec · linkedin.com/in/mihafriskovec · Ljubljana, Slovenia (CET)

SUMMARY

I build backend and full-stack systems for teams that can't afford production surprises — APIs, integrations, and features in Kotlin and Java with Spring Boot or Micronaut, and React or Angular on the front when a project needs it. Around a decade across SAP, Medifit, Zemanta, and SMARTIS moved me from front-end work into backend architecture, designing for scalability, security, and long-term maintainability, then seeing systems through deployment and monitoring. I work AI-augmented — coding assistants and LLM-based workflows for prototyping, testing, and review — without lowering the bar for what "done" means. I take on select freelance and contract projects alongside my full-time role.

EXPERIENCE

Mar 2025 – Present

Senior Software Engineer

SAP

Apr 2020 – Present

Freelance Software Engineer

Independent

Select backend and AI-integration engagements alongside full-time work — architecture, API and integration builds, and taking systems to production.

Oct 2022 – Mar 2025

Senior Software Engineer

Medifit

Micronaut

Kotlin

May 2020 – Oct 2022

Software Engineer

Zemanta, an Outbrain company

Go

Kotlin

Jul 2015 – May 2020

Ljubljana

Software Engineer

SMARTIS

Full-stack developer, primarily Node.js — Express, Fastify, Sails, and framework-less services — with MongoDB and PostgreSQL from both the developer and the design / maintenance / monitoring side, and Git-based CI (GitLab CI) for deploys. Built SAP integrations, a Smart City platform, TANGO energy management, an alarming service, and a KPI manager. The SmartIScity project folds in here: a PostgreSQL database with DB↔ESB triggers, simple ESB apps, a Sequelize + Node.js backend, and an AngularJS web app.

Node.js

TypeScript

PostgreSQL

MongoDB

AngularJS

SKILLS

BACKEND

Kotlin, Java, Spring Boot, Micronaut, Go, Node.js

FRONTEND

React, Angular, TypeScript

DATA

PostgreSQL, MongoDB, Redis

DELIVERY

Docker, GitLab CI, deployment & monitoring, security hardening

AI-AUGMENTED

Coding assistants and LLM-based workflows for prototyping, testing, and code review

FOCUS

Architecture over typing: systems designed for scalability, security, and long-term maintainability, with code other developers can pick up without a walkthrough. Available for select freelance and contract projects — backend, integrations, and AI.
